- Development
- Summary

# Flow Chart

# C code on Arduino

```
if (flag == 0){  
    controllLight(val); //Initial state is controlling light  
}  
else {  
    controlAlarm(val); //Press the button to switch to Security Mode  
}
```

# Sending Email

- Communication with Python program through USB port
- ***Serial*** library
- Arduino sends signal to Python program, then Python program sends email

# Agenda

- Overview of project
- Materials
- Demo
- How to implement
- Development
- Summary

# Development

- If no energy (electricity) ?

# Development

- If no energy (electricity) ?  
→ Supplying separated power

# Development

- If no energy (electricity) ?  
→ Supplying **separated** power
- If having a small motion when sleeping ?

# Development

- If no energy (electricity) ?  
→ Supplying **separated** power
- If having a small motion when sleeping ?  
→ Counting **number** of detecting motion

# Development

- If no energy (electricity) ?  
→ Supplying **separated** power
- If having a small motion when sleeping ?  
→ Counting **number** of detecting motion
- Using application to control ?

# Agenda

- Overview of project
- Materials
- Demo
- How to implement
- Development
- Summary

# Summary

- Finished project: Smart Light
- Experiences:
  - Team work
  - IoT knowledge
  - Cultural exchange

**THANK YOU**

Any question?
